

I can describe how some plants and animals are suited to different habitats.

1. Plants and animals that live in the desert need to survive without much water because the deserts are very dry.
2. The only plants that can grow in the Arctic region are grass and mosses. Trees can't grow here because the ground stays frozen all year round.
3. Lots of animals in the rainforest live high up in the trees where there is plenty of food.
4. There are more than 21,000 species of fish in the ocean. Fish breathe underwater using special organs called gills.

I can describe how animals obtain food by eating

**Food chains.** The arrows mean 'is eaten by'.

| Key Words      | Meaning  |
|----------------|--|
| Habitat        | The specific area or place in which particular animals or plants may live. |
| Micro- habitat | A very small habitat like under a rock                                     |
| Food chain     | A food chain shows how each animal gets its food.                          |
| Shelter        | A place that gives protection from bad weather or danger                   |
